

Here are some ideas on what you can do to prepare for quizzes and tests.

- **Study your Yellow Folder notes.**
 - Don't just read them. Try having someone quiz you. Or, cover up parts of the notes and see if you can tell what would be there.
- **Rewatch the EdPuzzles.**
 - Pause frequently and see if you can answer questions or give info before the video does.
- **Go back through the Desmos activities.**
 - We develop a lot of ideas in these and practice a lot of problems. See if you can recall what we learned and try the problems again.
- **Rework the Independent Practice. Yes, the same ones you've already done.**
 - Hopefully, your previous work is clear and will make for a great step-by-step answer key.
- **Do extra problems from the workbook.**
 - You can get answers by finding the video that goes with them on my website.
 - Example: Complete Unit 1 Workbook pages 67 - 68.
 - Notice this is part of lesson 9: Formula for the Area of a Triangle
 - For answers, go to my website, then "Unit 1."
 - Click the link under "Lesson Videos."
 - a. Find the video that goes with this lesson by the NAME, not the lesson number and zoom through the video until you see the problems you did.
- **Do extra practice on my website impsnyder.weebly.com.**
 - I've linked all sorts of resources sorted by topic.
